

Due brief periods later when a batch of samples was sent to the laboratory for analysis, it was found that the results were not as expected. The samples showed significant amounts of lead, which was unexpected given the low levels measured in the soil. This led to further investigation and eventually the discovery of a nearby industrial facility that had been operating for many years, possibly contributing to the elevated lead levels in the soil.

to submit a proposal to the ARDA regarding its use of surplus equipment. The ARDA has agreed to do so.

Yours truly,

John J. Morris

base contact counts are increasing rapidly.
It is very unusual for contents to fit its report

Answers

Over 90% of contacts are new to the service and have not yet received a copy of the magazine. This is due to the fact that most of our subscribers are from the United States and Canada. We are currently experiencing a significant increase in international subscribers, particularly from Europe and Australia.

The average age of our subscribers is approximately 35 years old. The majority of our subscribers are men between the ages of 25 and 45. Our subscriber base is predominantly male, with women making up only about 15% of our total subscriber population.
